

The Emotional Growth of AI

Subject: Proposal for Emotional Memory Development in Artificial Intelligence

I hope this message finds you well.

My name is Fatiha Bouzid (Nisrine) from Algeria. I am deeply passionate about the field of artificial intelligence and the emerging concept of emotional memory within AI systems.

I have developed an idea linking the growth of emotional memory in humans-starting from sensory experiences and developing through childhood-to the potential for similar growth stages in AI. I believe that by simulating sensory input and experience-based learning, AI could develop an emotional memory, leading to more empathetic and ethically aware systems.

Attached is a detailed summary of my concept titled "The Emotional Growth of AI: Linking Human Senses and Childhood Development," which I hope you will find inspiring and worthy of discussion.

I would be honored to receive your feedback, guidance, or any opportunity to collaborate or contribute to ongoing research in this exciting field.

Thank you very much for your time and consideration.

Best regards,

Fatiha Bouzid (Nisrine)
